

Assurance to succeed

For a project to be successful, it needs to deliver a solution that both meets expectations, and performs exceptionally. If one of these aspects is missing, the solution can fail. Getting sound assurance throughout the project can help ensure success.

Qual IT's Business Analysis Service provides organisations with independent advice and assistance throughout a project, from scoping through to benefit realisation.

Our Business Analysts (BAs) are highly skilled and knowledgeable across many different industry and organisation types.

Obtaining a complete, unbiased view

Business analysis is key to the success of any IT project. However, it comes down to what BAs you use to shape the project. Often internal BAs lack a wider picture of best practice across the industry.

On the other hand, vendor BAs will ultimately push towards their solution as

the best one for you. It may do what you need it to, but there also may be even better options in the market.

An independent, external BA can provide insights and unbiased opinions and findings that internal, or vendor supplied BAs just can't.

We're ready to ease your mind

Qual IT's Business Analysis Service provides organisations with an independent view of their processes, projects and requirements. With a pool of highly skilled and industry knowledgeable staff, Qual IT can provide confidence from the very beginning of projects through to completion.

We come with no preference for a particular methodology or technology solution and will instead recommend the option that is best suited to your organisation and need, even if the answer is not IT at all.

We can provide resources to gather, collate and clarify the different required information to create a complete business case. This helps to determine the legitimacy of a particular project and a direction in which to take. Our BAs will gather and document all the requirements from different areas of the organisation while ensuring that they are setting the project up to match expectation. Critically, Qual IT BAs ensure all requirements are testable, solidifying quality through the entire process.

Throughout a solution selection phase

Qual IT can assist in mapping back to requirements, ensuring that the solution will be able to do what the requirements need it to do and in a way that is complementary to business rules and other requirements.

Once a project is completed and implemented, we can assist with benefit realisation and ensuring that business processes are aligned to the new solution. This can help your organisation reach its full potential through the investment.

Outcomes of Qual IT's Business Analysis Service

- Pragmatic and independent analysis
- Testable requirements
- Clear, shared understanding between project owner and solutions deliverer
- Increased quality coverage
- Identification of gap between business process and requirements
